PowerFlex Drives

PowerFlex Drives provide benefits that make a difference for your productivity

The Allen-Bradley® PowerFlex family of AC and DC drives has been developed to provide the benefits that matter most to you. We focus on delivering a flexible portfolio designed to give you visibility into the critical data from your operations and ultimately help improve productivity. The result helps you achieve the positive impact you need to be successful.

Flexibility allows PowerFlex drives to meet a wide variety of application requirements.

- A broad range of motor control algorithms to handle the simplest to the most demanding applications. PowerFlex drives are compatible with most motor brands
- A wide selection of hardware, software, safety and packaging options to fit your application
- Support for a variety of communication options

Visibility is key to monitoring your application and taking the appropriate actions to maintain smooth operations. The seamless flow of real-time information within your application can help to enhance the agility and productivity of your machine.

- Connect your application using seamless visibility and communications between the plant floor and control room
- Access to real-time data allows information-enabled decisions to keep production running smoothly
- Improved visibility into your application helps to enhance operational efficiency

Productivity is built into every PowerFlex drive.

- Safety features help protect personnel and assets while enabling reduced downtime after a safety event
- Premier Integration into the Logix environment streamlines configuration and programming
- Advanced diagnostics provide actionable insights
- Patented TotalFORCE Technology in PowerFlex 755TL, 755TR and 755TM drives provides:
 - Enhanced torque regulation
 - Adaptive control for real-time motor control optimization
 - Predictive maintenance to help reduce downtime

“Rockwell Automation products are easy to use... We were able to reduce the programming and configuration time, too thanks to Studio 5000 – primarily due to all the primary components being on the same network and programmed in the same single software package. This common-platform approach reduced overall wiring, because all components communicate over Ethernet, so you only need a patch cable instead of 10 separate wires mounted in a panel. All the drives deploy safety over Ethernet, too, which gives a lot of flexibility in programming the PACs...”

Dan-Web, Airlaid Equipment Manufacturer, Galten, Denmark

Drive Efficient Operations

Efficiency translates to savings. Motors typically consume as much as 60% of the energy in an industrial facility. Adjusting the speed of motors to exactly match the requirements of the application can help provide significant savings to your operations. PowerFlex drives are capable of providing both an immediate and measurable impact on energy use and operational productivity.

- Some PowerFlex drives offer an **Economizer mode** which consists of sensorless vector control with an additional energy savings function. When steady-state speed is achieved, the economizer becomes active and automatically adjusts the drive output voltage based on the applied load. Matching the output voltage to the applied load helps optimize motor efficiency.
- The option for **permanent magnet motor control** is available with many PowerFlex drives. Using permanent magnet motors can help improve energy efficiency and reduce related costs. The higher power density provided by permanent magnet motors often results in a motor size reduction while maintaining the same output torque.
- PowerFlex drives with **regeneration capability** help reduce energy consumption by delivering regenerative energy from motors back to the incoming power supply.

Specific Application Control

Select PowerFlex drives have specialized drive parameters configured to support a particular application. Application Sets are a configuration of the standard drive parameters designed to simplify a user's implementation of a standard drive application without the need for custom programming.

TorqProve™ Control – This feature helps confirm control of the load in lifting and hoisting applications.

DeviceLogix™ Control – This embedded control technology in PowerFlex 753 and PowerFlex 755 drives can control outputs and manage status information onboard the drive. An enhanced version of DeviceLogix control is provided with PowerFlex 755T drives, with up to 500 instruction blocks to configure.

AppView® Parameter Groups – Simplify configuration of PowerFlex 523 and 525 drives by providing parameter groups for common applications including conveyors, mixers, pumps and blowers.

CustomView™ Parameter Groups – Reduce future design time by quickly defining your own group of parameters for PowerFlex 523 and 525 drives.

Motor Control Optimization

Optimize your application with a wide range of control technologies from open loop speed regulation to precise torque and speed control. In addition to industry standard motor control, the PowerFlex family offers unique control technologies that can provide you with even greater application flexibility.

- **FORCE Technology** is the original Allen-Bradley patented Field Oriented Control that provides excellent low speed/zero speed performance and delivers accurate torque and speed regulation.
- PowerFlex 755T drives are the first to offer **TotalFORCE™ Technology** which builds on the original FORCE technology to deliver superior motor control through precise, adaptive control of velocity, torque and position for electric motors. TotalFORCE Technology incorporates several patented features that are designed to help optimize your system and maintain productivity.

Access Real-time Information

Getting valuable **real-time data** from your application can help enhance the productivity of your business.

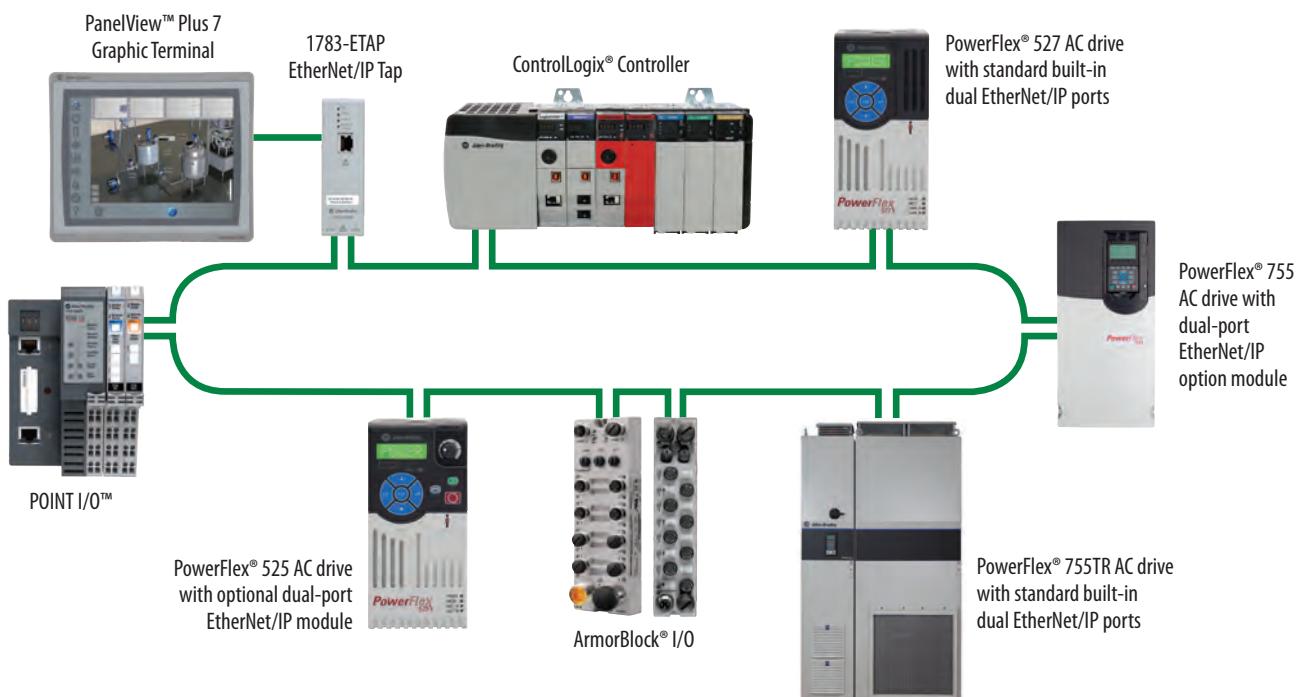

As part of the Rockwell Automation® Integrated Architecture®, PowerFlex drives can do much more than just respond to interlocking commands. They provide valuable **diagnostic information** and can be configured as a natural extension of the system.

In addition, you can leverage FactoryTalk® Analytics for Devices. It runs embedded in the network, identifying diagnostics and potential problems with individual devices. Dashboards and action cards are used to group and summarize information, visualize key indicators, and show exceptions. This **window into critical production and process information** as well as enterprise data helps you make good decisions and improve operational efficiency.

EtherNet/IP™ connectivity supports seamless integration into the Logix environment. PowerFlex drives help you apply this open, widely adopted network by making connections simple with built-in or optional EtherNet/IP communication ports.

EtherNet/IP connectivity provides the flexibility to support multiple network topologies – linear, star, or ring configurations. An added advantage is the support for device level ring (DLR) functionality. Implementing a DLR system, helps you achieve higher network resiliency. If one device on the EtherNet/IP network fails, communication is rerouted allowing the devices to continue operation.

In addition to EtherNet/IP, PowerFlex drives are capable of supporting industrial communication protocols found throughout the world. See the drive options for more details.

A Device Level Ring system helps you achieve higher network resiliency. If one device on the EtherNet/IP network fails, communication is rerouted, allowing the devices to continue operation.

Simplified Drive Configuration and Programming

PowerFlex drives help make configuration and programming fast and uncomplicated with a choice of easy-to-use software packages and tools. Each tool has been designed to be powerful and intuitive to help enhance your user experience and reduce your development time so you can deliver machines faster and more efficiently.

Human Interface Module

The Human Interface Module (HIM) provides convenient configuration.

- Features a high definition LCD
- Supports multiple languages
- Provides meaningful explanations of parameters and events so you don't have to search through a manual for details
- Available with most PowerFlex drives. Refer to specific drive details

Connected Components Workbench Software

Connected Components Workbench™ programming and configuration software leverages proven Rockwell Automation and Microsoft® Visual Studio® technologies for fast and easy drive configuration, controller programming, and integration with the HMI editor.

- Free software helps you get your drives up and running with an intuitive interface and startup wizards
- Localized language support
- Online and offline configuration
- Context-sensitive "Help"
- Supports PowerFlex drives as well as Micro800® programmable controllers and PanelView component graphic terminals
- Trend capability for PowerFlex drives and other select power products

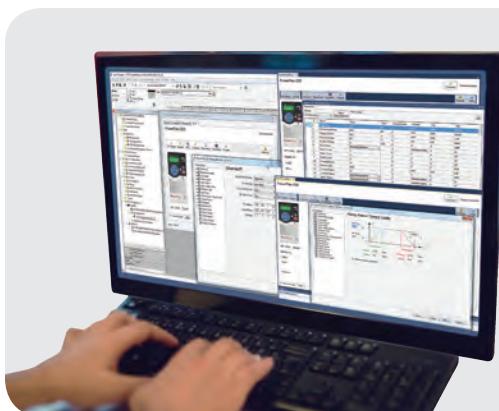

Configuration and Programming with Studio 5000 Logix Designer

PowerFlex drives are able to achieve an exceptional level of integration with Logix Programmable Automation Controllers (PACs) within the Studio 5000® environment.

- Data associated with the drive is automatically generated to ease configuration and minimize the need to manually program the required parameters and tags
- Increase productivity with easy access to system and machine level data as well as diagnostic information

The PowerFlex 527 and 755 AC drives can be programmed using motion instructions in the Studio 5000 environment. These motion instructions are shared with Kinetix® servo drives, providing a common configuration, programming and control experience for both types of drives.

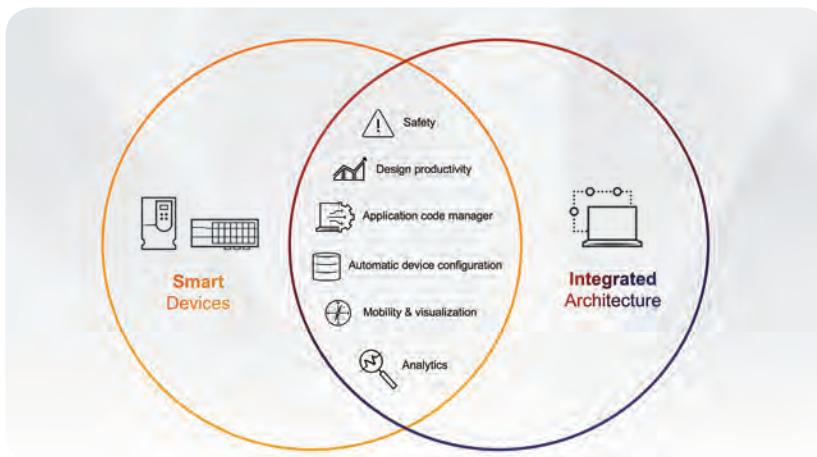

- Consistent configuration of AC and servo drives simplifies machine development and use
- The use of motion instructions allows code reuse which helps make machine design more efficient
- Synchronization of drives and other EtherNet/IP compliant devices helps enhance performance for applications that require high accuracy
- Controller-based safety instructions are common across VFD and servo drive platforms

Configuring PowerFlex drives with the Studio 5000 Logix Designer® application lets you consolidate controller programming and drive system configuration, operation, and maintenance into a single software environment.

Premier Integration

Premier Integration is the exclusive experience of integrating Allen-Bradley smart devices into the Logix control environment.

Studio 5000 – A Single Programming Software

The Studio 5000 environment serves as a single programming tool for the design and configuration of your application. You need only one software package for discrete, process, batch, safety and drive-based applications.

- Single development environment to configure and program your entire control and device system
- Drive configuration is saved as part of the Studio 5000 Logix Designer project file and stored in the Logix controller. You only need one file for both the controller and all drive configurations
- Consolidating controller programming and device system configuration helps reduce complication and eliminates mismatch errors
- Diagnostic, fault, alarm and event information are integral to the Studio 5000 environment

Studio 5000 software can help reduce programming time by automatically populating drive parameters in the controller memory as controller tags.

- Descriptive tag names are automatically generated
- Address mismatch errors can be eliminated
- Copy and paste function makes duplicating drives fast and easy
- Advanced graphical wizards walk you through drive configuration

Leverage the Studio 5000 environment to manage Application Libraries.

- Rockwell Automation provides libraries of application code that enable you to take pre-built code and apply it to any Allen-Bradley automation device, making set-up of the equipment fast and easy
- Application Code Manager enables time savings during commissioning and enhanced productivity by reusing application code independent of automation device platform

Analytics and Visualization

Analytics and visualization provide windows into critical production and process information gathered from self-aware and system-aware smart devices like PowerFlex drives. This enables you to:

- Predict mechanical problems and help improve performance with diagnostics and real-time data
- Monitor performance either locally or remotely to make informed decisions about your assets
- Investigate, collaborate and troubleshoot in the plant – instantly with no setup with very little changes to their infrastructure
- Provide a common user experience for all Rockwell Automation devices using our HMIs and mobility platforms
- Pre-engineered faceplates offer rapid project development and standard operator experience

Simplify Machine Programming and Use

To further simplify your drive and controller set up, you can use Studio 5000 motion instructions which allow you to speed the programming of your PowerFlex 527 and PowerFlex 755 drives.

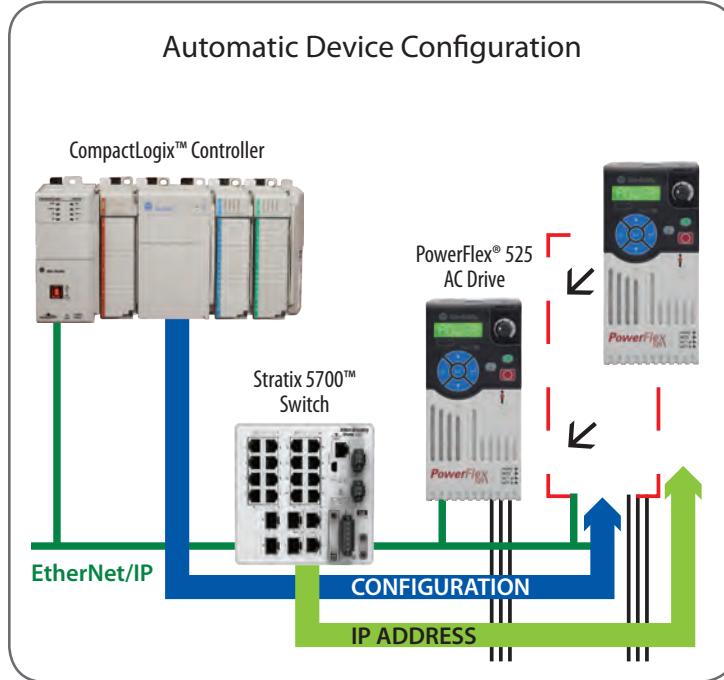

The ability to configure and program both variable frequency drives and servo drives using the same motion instructions in the Studio 5000 environment has some obvious benefits. For customers using both PowerFlex AC drives and Kinetix servo drives, you gain a common user experience that can help reduce complexity and save valuable engineering time.

The use of the Studio 5000 Logix Designer motion instructions allow the PowerFlex 527 and PowerFlex 755 drives to perform as a natural extension of the controller. This level of integration provides exclusive application resources that offer additional time-saving features and performance enhancements.

- The use of motion instructions allows code reuse which helps make machine design more efficient
- Powerful diagnostics, including time stamped events, provide precise drive information to help you quickly identify and resolve problems
- With the use of motion instructions, the Logix controller maintains every aspect of the drive's parameters, and resets them each time it connects to the drive. This creates inherent automatic device replacement to help minimize machine downtime
- Synchronization – from very simple electronic gearing to electronic camming – can be accomplished using just a few instructions. Synchronization can be done over the network without the need for any additional hardware devices
- PowerFlex 527 drives exclusively use Studio 5000 software and Logix programmable automation controllers for operation
- PowerFlex 755 drives offer the option to use motions instructions in the Studio 5000 environment

Automatic Device Configuration

Automatic Device Configuration

Automatic device configuration (ADC) allows Logix controllers to detect a replaced PowerFlex drive and download all configuration parameters automatically, minimizing the need for manual reconfiguration. This feature helps to enhance productivity by facilitating reduced downtime.

ADC can be used with PowerFlex drives that have a standard built-in EtherNet/IP port or drives using a dual-port EtherNet/IP option.

Find the latest firmware at: www.rockwellautomation.com/global/support/pcdc.page

Safety Solutions Help Improve Productivity

In the past, implementing safety solutions often meant sacrificing productivity. PowerFlex drives address productivity concerns by offering safety options that help protect your people and equipment while also reducing unplanned downtime.

Safety can be implemented with PowerFlex drives using either built-in features or add-on safety options. Choose from a hardwired configuration that is wired directly into the drive. Or use networked safety that is delivered via EtherNet/IP with select drives.

Safe Torque Off is ideal for safety-related applications that benefit from removal of rotational power to the motor without removing power from the drive. This functionality offers the benefit of quick start-up after a demand on the safety system. It provides safety ratings up to and including SIL3, PLe and CAT 3.

Safe Speed Monitor provides a solution for applications that can benefit from access to a safety zone while there is limited motion. It allows operators to perform some process or maintenance work without stopping the machine. This option carries a safety rating up to and including SIL3, PLe and CAT 4.

Integrated safety functions provide PowerFlex 755, 755TL, 755TR and 755TM AC drives with advanced safety on an EtherNet/IP network. The option module uses safety instructions based on IEC 61800-5-2. Drive-based safety instructions include:

- STO – Safe Torque Off
- SSI – Safe Stop 1

Controller-based safety functions include:

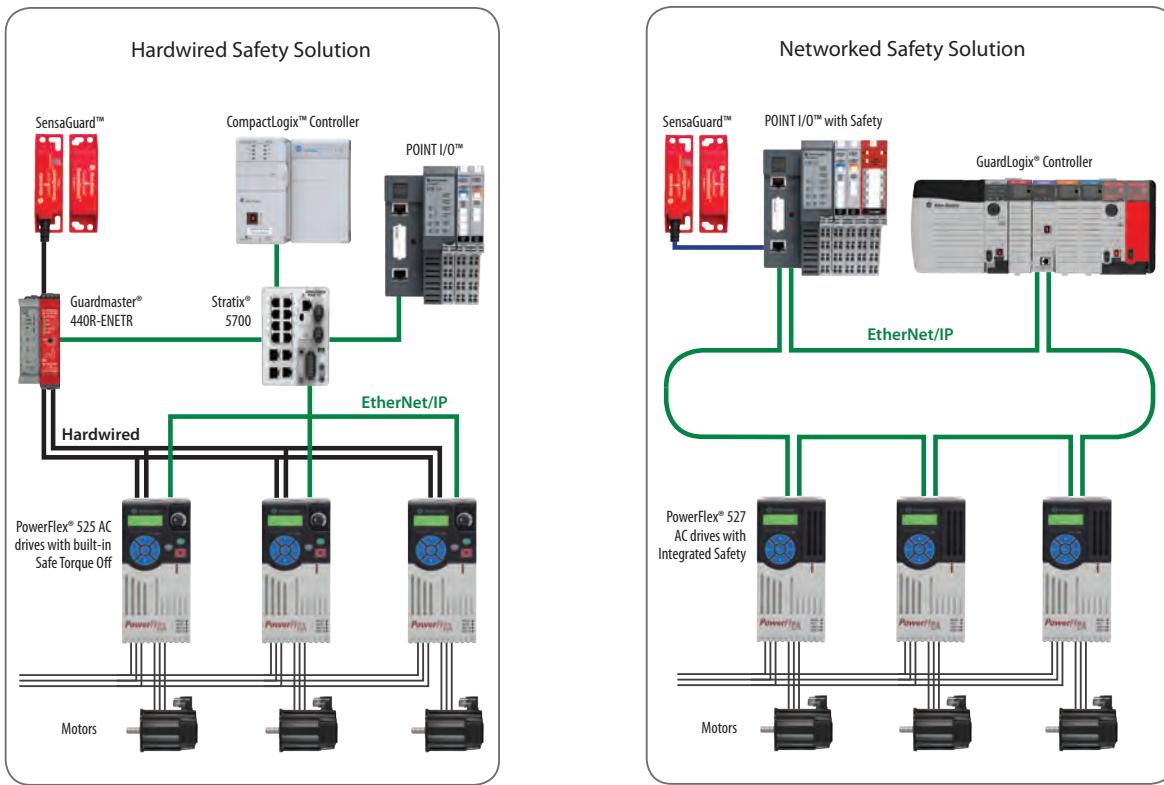

- SFX – Safety Feedback Interface
- SS1 – Safe Stop 1
- SS2 – Safe Stop 2
- SOS – Safe Operational Stop
- SLS – Safely-limited Speed
- SLP – Safely-limited Position
- SDI – Safe Direction
- SBC – Safe Brake Control

PowerFlex AC drives and Kinetix servo drives use the same safety functions for a common, simplified user experience.

When used as part of an integrated safety system that includes a GuardLogix 5580ES controller or Compact GuardLogix 5380ES controller, the integrated safety functions option module provides safety ratings up to and including SIL3 and PLe Cat 4. Studio 5000 Logix Designer application version 31 or later is also required.

Look to the portfolio of Allen-Bradley safety solutions to help achieve your safety needs.

	Hardwired Safe Torque Off	Networked Safe Torque Off	Safe Speed Monitor	Networked Integrated Safety Functions
PowerFlex 525 Drive	Built-in: SIL2, PLd, CAT 3	N/A	N/A	N/A

Controller-based safety helps reduce hardware and installation costs while improving productivity

Benefit from the ability to integrate safety into your control system. Networked Safe Torque Off provides the same benefits as hardwired Safe Torque Off – plus the ability to simplify your machine design and minimize equipment redundancies.

- A single GuardLogix controller can be used for both safety and standard control
- Reduce the need to write and coordinate multiple programs on different controllers, to simplify application programming and reduce training and support costs
- Fewer components mean smaller panel enclosures, saving money on control cabinets and floor space
- The integration of the safety and standard control systems provides operators and maintenance personnel with visibility to all machine events – including safety events. This enables a quick response that allows the machine to return to full production
- Safety and non-safety functions share the same EtherNet/IP network
- Networked safety provides a common, unified safety programming method. Both VFD and servo drive solutions are applied in the same way for a simplified, common user experience

- More safety tags are seen in controller
 - Safe off condition
 - Connection status
 - Safety fault condition
 - Reset Requirement
- Standard feature for PowerFlex 527 drives
- Option for PowerFlex 755, 755TL, 755TR and 755TM drives.

Zone Control

In the past, a safety event in one section of a machine could result in the entire machine shutting down because the standard system had limited knowledge of the safety event. But networked safety allows the control and safety systems to coexist on the same network and to share data between the safety and standard applications. This allows “zone control” where one zone of the machine is brought to a safe state while other zones continue to operate.

- Using a networked safety solution, drives and their respective motors are grouped together into zones. All zoning is done completely in the controller – compared with a hardwired solution in which drives have safety inputs daisy chained together
- Future modifications to your application can be greatly simplified which helps to save you both time and money

PowerFlex 520-Series AC Drives

The next generation of powerful performance. Flexible control.

Allen-Bradley PowerFlex 520-Series AC drives combine innovation and ease of use to provide motor control solutions designed to maximize your system performance and reduce your time to design and deliver better machines. Each of the three drives in this family offers a unique set of features to distinctively match the needs of your application.

PowerFlex 523 AC drives are ideal for machines that require cost-effective motor control. They are designed to help reduce installation and configuration time while providing the control your application needs.

- Standard USB port for upload/download drive configuration
- Flexible installation and sensorless vector (SVC) motor control
- Optional communication modules make it easy to add drive to a network

PowerFlex 525 AC drives are ideal for machines with simple system integration and offer standard features including Safe Torque Off and a built-in port for EtherNet/IP.

- Seamless integration into Logix control architectures along with Automatic Device Configuration
- Flexible installation and motor control options including permanent magnet motor control
- Optional communication modules make it easy to add drive to a network

PowerFlex 527 AC drives are designed to be used with an Allen-Bradley Logix Programmable Automation Controller (PAC). Ideal for machines that can benefit from the same drive configuration experience for both servo and AC drives, this new approach to motor control helps to reduce engineering time and enhance motor coordination for improved machine performance.

- Safe Torque Off feature can be hardwired or deployed over the EtherNet/IP network
- Built-in dual-port EtherNet/IP supports multiple network topologies and Device Level Ring functionality
- For applications that require both simple speed control as well as precise motor functionality, a combination of AC and servo drives is the logical solution. The PowerFlex 527 AC drive can manage the simple speed control while a Kinetix servo drive handles the more precise motor control operations involving speed, torque and position control

 <p>Simplified Programming – MainsFree™ programming allows configuration files to be uploaded and downloaded to the PowerFlex 525 and PowerFlex 523 drive control module via a USB connection.</p>	 <p>High Operating Temperature – A control module fan kit allows PowerFlex 520-Series AC drives to run in temperatures up to 70 °C (158 °F) with current derating.</p>
 <p>Innovative Design – The modular design helps reduce spare parts inventory and provides a faster way to install and configure drives.</p>	 <p>Flexibility – All PowerFlex 520-Series drives can be installed vertically or horizontally as well as side by side in either orientation. A control module fan kit is required for horizontal mounting.</p>

Key Features

PowerFlex 525 AC Drive with permanent magnet motor control helps improve energy efficiency

Our PowerFlex 525 drives now have the ability to control permanent magnet motors that can help improve energy efficiency and reduce related costs. The higher power density provided by permanent magnet motors often results in a motor size reduction while maintaining the same output torque.

- Greater efficiency with permanent magnet motors helps you reduce energy costs
- Both interior mount (open and closed loop) and surface mount (open loop) permanent magnet motors are supported
- No new drive hardware is required

Use of permanent magnet motors requires version 5 firmware for the drive. The firmware and release notes can be found in the [Product Compatibility and Download Center](#).

Save panel space with a compact footprint that provides flexible installation

The PowerFlex 520-Series drives offer a space-saving modular design that helps reduce panel space and offers installation flexibility.

- All three drives can be installed vertically or horizontally as well as side by side in either orientation. A control module fan kit is required for horizontal mounting
- Drives can support an accessory communication card without affecting the size of the drive, saving space inside a panel
- **Zero Stacking™** mounting with a small 50 mm airflow gap is allowed for ambient temperatures up to 45 °C (113 °F)* to save valuable panel space

*Frame E at 60 °C to 70 °C requires 95mm (3.74 in) airflow gap at the top of the drive

Maintain a compact footprint when accessory cards are installed

*Product shown is at actual size,
PowerFlex 525 AC drive Frame A*

PowerFlex 750-Series AC Drives

Bringing flexibility, connectivity and productivity to your application

The PowerFlex 753 and 755 AC drives were designed with your needs in mind. Your need for flexibility, connectivity and productivity has been considered in every detail of these drives. The result is a series of AC drives that provides an exceptional user experience, from initial programming through operation and maintenance. Offering more selection for control, communications, safety and supporting hardware options than any other drives in their class, PowerFlex 750-Series AC drives provide the features you need to help maximize your productivity.

PowerFlex 753 AC drives are cost-effective and easy to use for more general purpose applications. They feature standard built-in I/O plus three options slots for communications, safety and additional I/O. Designed to meet your application requirements for speed and torque control up to 270 kW/400 Hp.

- Embedded I/O along with three option slots for safety, feedback, communications, 24V power or additional I/O make the drive a flexible, cost-effective solution
- Safe Torque Off and Safe Speed Monitor options help to protect personnel and assets while reducing downtime

PowerFlex 755 AC drives provide ease of use, application flexibility and high performance. They include multiple control, hardware, and safety options. These drives are well-suited for a wide variety of applications with multiple motor control selections. Built-in EtherNet/IP delivers real time operating data and easily integrates into the Logix control system. Ideal for applications requiring position, speed or torque control up to 1500 kW/2000 Hp.

- Seamless integration into Logix control architectures along with Automatic Device Configuration
- Built-in single port EtherNet/IP plus five option slots to support additional options for feedback, I/O, safety, communications and auxiliary 24V DC control power
- Safety options include hardwired or networked Safe Torque Off, hardwired Safe Speed Monitor and networked integrated safety functions
- Ideal for coordinated drive systems applications, positioning applications and lifting applications (TorqProve)
- DeviceLogix to complement system programming capabilities
- Option to use motion instructions within Studio 5000 to help reduce engineering time for applications using both AC and servo drives
- Uses same network safety instructions as other Allen-Bradley products

Communications – The PowerFlex 750-Series AC drives support a comprehensive range of network protocols to ease integration into your architecture.

Safety Options – Help protect personnel and equipment while reducing machine downtime with safety solutions that include Safe Torque Off and Safe Speed Monitor. PowerFlex 755 drives also offer multiple safety functions on EtherNet/IP.

Power and Packaging – Complete power range of 0.75 to 1500 kW (1 to 2000 Hp) plus 200/240, 400/480 and 600/669 volt availability for global applications. Packaging options are available to meet a variety of application environmental conditions.

Predictive Diagnostics – Help reduce unplanned downtime with predictive diagnostics and built-in protection features designed to guard your investment.

Configure for Your Application – The drives have a slot-based hardware architecture that gives you the flexibility to select up to five option cards to suit your application and expand your drive for future needs.

Integrated safety functions option module provides multiple safety functions on EtherNet/IP network

AC drive applications that require safety functionality can now benefit from the integration of safety and standard control systems on a single network using one controller. The Integrated Safety Functions Option Module offers several safety functions based on IEC 61800-5-2 standards for PowerFlex 755 and 755T AC drives. It includes the ability to monitor speed, direction and position on an EtherNet/IP network.

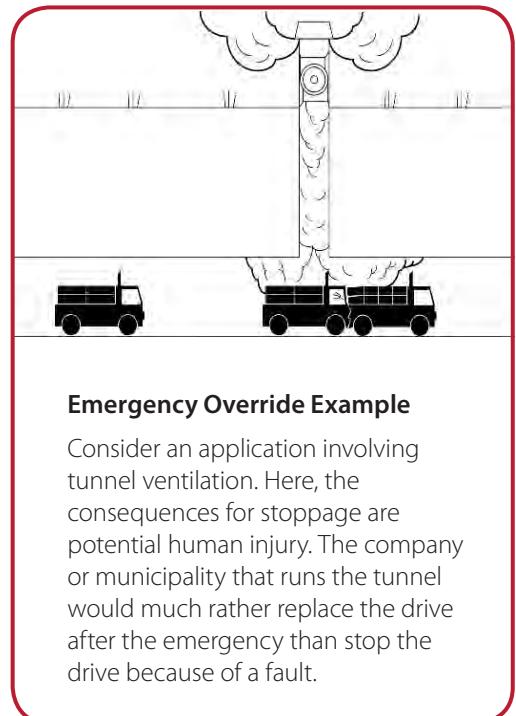

Studio 5000 Logix Designer application version 31 or later is required. Firmware Version 14.002 is also necessary.

For more details, see page 8 or publication [755-PP003](#) in Literature Library.

New firmware provides flexibility and functionality

Firmware Version 14.002 for the PowerFlex 753 and 755 AC drives offers the following enhancements:

- Both filtered and **Unfiltered Feedback** are now available with the drives. The addition of the unfiltered feedback provides detailed information involving the monitoring of motor current, torque current and DC bus voltage. This feature adds additional application flexibility and troubleshooting functionality.
- **Emergency Override** is a new capability for PowerFlex 750-Series drives. It provides the drive with the ability to ignore many of its self-protections. The product will continue to run even if these disabled protections cause damage to the drive. This feature is useful in applications where the consequences for stoppage are worse than replacing the drive.
- The **Home to Torque** feature is similar to homing with a limit switch or homing at a hard stop. Normally, it's necessary to install a limit switch to bring the signal to the drive for homing functionality. This new feature will eliminate the need to install a limit switch as well as the electrical wiring from the limit switch to drive terminal blocks. This method helps save time and reduce complexity. It functions with and without an encoder.
- **Auto Clear Fault** is a new feature that enables a drive in inactive mode to automatically perform fault reset and prepare to restart. It can be used at the same time as the established Auto Restart feature that allows a drive in active mode to automatically perform a fault reset followed by a start attempt without intervention. These features are beneficial for applications that are remote or unattended.

Emergency Override Example

Consider an application involving tunnel ventilation. Here, the consequences for stoppage are potential human injury. The company or municipality that runs the tunnel would much rather replace the drive after the emergency than stop the drive because of a fault.

PowerFlex 755T Drive Solutions

TotalFORCE® Technology provides a proactive approach to improving uptime

Your investment is significant. The application is crucial. And improving productivity is essential. Finding the right AC drives to help optimize assets and make good use of valuable time is an important part of achieving your goals. That's why we developed the PowerFlex 755T drives. They have been built to help you save time, reduce costs and keep your machine up and running.

The PowerFlex 755T drives provide harmonic mitigation, regeneration and common bus solutions that help you reduce energy costs, gain flexibility and increase productivity. These are the first drives to offer TotalFORCE® technology to achieve excellent motor control through precise, adaptive control of velocity, torque and position for electric motors. TotalFORCE technology incorporates several patented features that are designed to help optimize your system and maintain productivity.

The new PowerFlex 755T drives include:

- **PowerFlex 755TL Drive** – Provides harmonic mitigation and power factor correction through the use of active front end technology. By reducing the adverse effects of harmonic distortion, the drive helps to improve energy efficiency, reduce energy costs and minimize power distribution issues on the factory floor.
- **PowerFlex 755TR Drive** – Features built-in regeneration capability that helps decrease energy consumption by delivering regenerative energy from motors back to the incoming supply. Line regeneration reduces the need for braking resistors and associated cooling equipment and helps avoid wasteful dissipation of energy. The drive also offers harmonic mitigation.
- **PowerFlex 755TM Drive System** – Select from a series of predesigned configurations for regenerative common bus supplies and common bus inverters to optimize your system design and power consumption. A common bus drive system offers advantages such as design flexibility, energy optimization and reduced installation costs. PowerFlex 755TM systems provide harmonic mitigation and built-in regeneration capability.

***PowerFlex 755T drives offer harmonic mitigation, regeneration and common bus solutions
in a wide power range of 10...6000 Hp / 7.5...4500 kW***

What's New

We've continued to build on the value provided by PowerFlex 755T drives, including enhancements to patented TotalFORCE Technology. Here are some of the new features and benefits designed to help improve performance and flexibility:

- **Expanded Power Ratings** – A broad power range of 10...6000 Hp / 7.5...4500 kW allows the drives to be used in an even wider variety of applications. The lower power ratings are provided in compact, panel mount drives.
- **DeviceLogix™ Control** – Provides built-in drive capability to process logic locally and reduce demands on the controller and network. The ability to operate the drive independently or complementary to supervisory control can help speed reaction time by reducing dependency on network throughput.
- **Permanent Magnet Motor Control** – Provides energy-efficient addition to the wide variety of motors supported.
- **Anti-sway Technology** – Designed to improve safety and efficiency in crane and hoist applications by reducing the swinging of a moving load.
- **Power Loss Ride-through** – Helps increase uptime for applications susceptible to voltage or currents sags. During a power disturbance, the nominal DC bus voltage is maintained by using the stored energy captured in the DC bus capacitor bank. Drives meet SEMI F47 standard for voltage sag tolerance.
- **Emergency Override** – Will override fault conditions and allow the drive to continue running until the user issues a stop command. This feature can be useful in applications in which stopping the drive could be potentially dangerous and may result in an emergency situation.
- **Energy Pause** – Reduces fan speed and sets the PowerFlex 755T drive or Bus Supply into a low energy state to help reduce overall energy consumption.

These new features complement the established benefits of the PowerFlex 755T drives, including:

- **Predictive Diagnostics and Maintenance** – Help improve productivity by monitoring drive operating conditions and calculating the remaining life span of drive components, so preventive action can be taken if necessary
- **Harmonic Mitigation** – Drives meet the IEEE 519 standard (5% or less of total harmonic distortion)
- **Serviceability** – Designed with key components that are modular in design and easily accessible. This allows for simplified servicing and helps reduce both cost and service time
- **Roll in/out Design** – Makes the power and filter modules easy to install and service. Power wiring can stay connected while unit is rolled out
- **Patented Slot-based Hardware Structure** – Allows you to select option modules for safety, feedback, communications and I/O. Option modules can be added if and when you need them
- **Adaptive Control** – As your equipment operates, load observer and adaptive tuning monitor machine characteristics that can change over time and automatically compensate for the changes that occur
- **Voltage Boost Ride-Through** – Helps keep equipment running through power quality disturbances

A convenient service cart allows one person to easily insert or remove a module for easy installation and maintenance

Remote Monitoring & Analytics

Gaining insight into the performance of your automation machinery is the key to optimizing your operations and preventing costly downtime events. To help reduce your downtime, Rockwell Automation provides the Remote Monitoring & Analytics Service – using powerful visualization and dashboard tools coupled with a support center staffed by Rockwell Automation experts who monitor your assets in real time to help keep you operating. This service is available for all PowerFlex 755T drives and PowerFlex 755 floor mount drives.

PowerFlex 4M AC Drive

0.2...11 kW/0.25...15 Hp in voltages from 100...480V

Providing users with motor speed control in a compact, space-saving design, the PowerFlex 4M AC drive is the smallest and most cost-effective member of the PowerFlex family of drives.

Providing application flexibility, feed-through wiring and ease-of-programming, this drive is ideal for machine-level speed control for applications that require space-saving and easy-to-use AC drives.

PowerFlex 400 AC Drive

2.2...250 kW/3...350 Hp in voltages from 200...480V

Providing users with easy installation and ideal for mechanical fan and pump systems, the PowerFlex 400 AC drive offers a wide range of built-in features that allow for seamless building system integration. The PowerFlex 400 is designed to meet global OEM, contractor and end-user demands for flexibility, space savings, and ease-of-use.

(1) Front = IP20, NEMA/UL Type Open, Back/Heatsink = IP40/54/65, NEMA/UL Type 1/12/4/X.

(2) Drive terminals are sized according to UL. Depending on operating ambient and wire used, some local or national codes may require a larger wire size than what the power terminals can accept. Multiple conductors, 90 °C (194 °F) wire, and/or lugs may be required. Refer to the PowerFlex 400 User Manual, publication [22C-UM001](#), for details on terminal block wire ranges.

(3) IP30, NEMA/UL Type 1 can be achieved for panel mount drives with top cover and optional conduit box kit installed. See page 32 for a field installed conversion kit.

(4) A DC bus inductor is not included. See page 35 for available inductors.

380...480V AC, Three-Phase Drives

PowerFlex 4-class Drives

PowerFlex 4 AC Drive

Designed to meet global OEM and end-user demands for simplicity, space savings, and cost efficiency, this drive provides intuitive features such as an integral keypad with local potentiometer and control keys that are active right out of the box.

PowerFlex 40 AC Drive

The PowerFlex 40 AC drive gives OEMs, machine builders, and end users performance-enhancing motor control in an easy to-use, compact package. The PowerFlex 40 features sensorless vector control to meet low speed torque demands that help improve application performance.

With flexible packaging options and an uncomplicated programming structure, this drive can be quickly and easily installed and configured for a variety of applications.

PowerFlex 40P AC Drive

The PowerFlex 40P AC drive addresses user needs for closed loop control with an option for Category 3 Safe Torque Off in a compact and cost effective design. Based on the popular PowerFlex 40, this drive is designed to meet global OEM and end-user demands for flexibility, space savings, and ease of use. This drive is a cost-effective alternative for speed or basic position control of applications such as diverters, smart conveyors, packaging machines, palletizers, drafting machines, ring spinning machines, and synthetic fiber spinning machines and shares common options and accessories with the PowerFlex 40.

Compact I/O Module (3 Channel)	1769-SM2	✓	✓
Serial Flash Firmware Kit Updates drive firmware via computer.	AK-U9-FLSH1	—	✓
Communication Adapter Cover Frame C Drive (PowerFlex 400) Note: Cover adds 25 mm (0.98 in.) to the overall depth of the drive.	22C-CCC		✓ ⁽³⁾

(1) PowerFlex 4 and PowerFlex 4M drives require External DSI Communication Kits. Communication Adapters cannot be drive mounted.

(2) When a 22-COMM-P adapter is configured for multi-drive mode, a PowerFlex 400 drive must be used as a master drive on the network.

(3) If IP30, NEMA/UL Type 1 is required, 22-JBCC must also be ordered; see IP30, NEMA/UL Type 1 Conversion Kit table.

IP30, NEMA/UL Type 1 Conversion Kit

Description	Frame	Cat. No.	Used with PowerFlex Drive	
			4M	400
Converts IP20 drive to IP30, NEMA/UL Type 1 enclosure. Includes conduit box, mounting screws and plastic top panel.	C	22-JBAC	—	✓
Converts IP20 drive to IP30, NEMA/UL Type 1 enclosure. Includes communication option conduit box, mounting screws and plastic top panel.		22-JBCC		✓

Dynamic Brake Resistors

PowerFlex 523 AC Drive

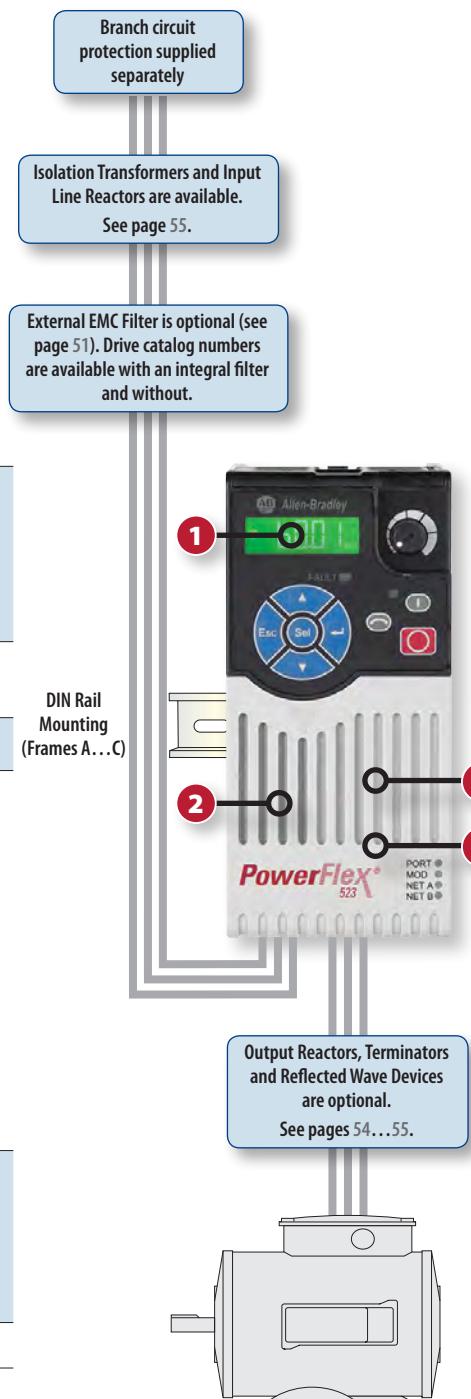

0.2...22 kW/0.25...30 Hp in voltages from 100...600V

PowerFlex 523 AC drives are designed to help reduce installation and configuration time with an innovative modular design while providing just enough control for your application. These drives offer convenient programming features with the fast upload and download of configuration files over a standard USB connection, as well as installation flexibility with Zero Stacking and a high ambient operating temperature. PowerFlex 523 AC drives also provide a variety of motor control options, making these drives ideal for simple applications.

Options	See pages 49...56

(1) Requires Dual-port EtherNet/IP Option Module (Cat. No. 25-COMM-E2P).

- 1** LCD QuickView™ Human Interface Module (HIM) with multi-language support in scrolling text. See page 49 for additional options.
- 2** Communications: Integral RS-485 with Modbus RTU/DSI. Other communication options available and can be added to the drive without size penalty. See page 49 for other options.

- 3** Embedded I/O: 5 digital inputs, 1 analog input, 1 analog output*, and 1 relay output.
- 4** Integral brake IGBT. See page 56 for brake resistors.

* Requires Version 3 firmware for the drive, as well as Series B hardware.

PowerFlex 525 AC Drive

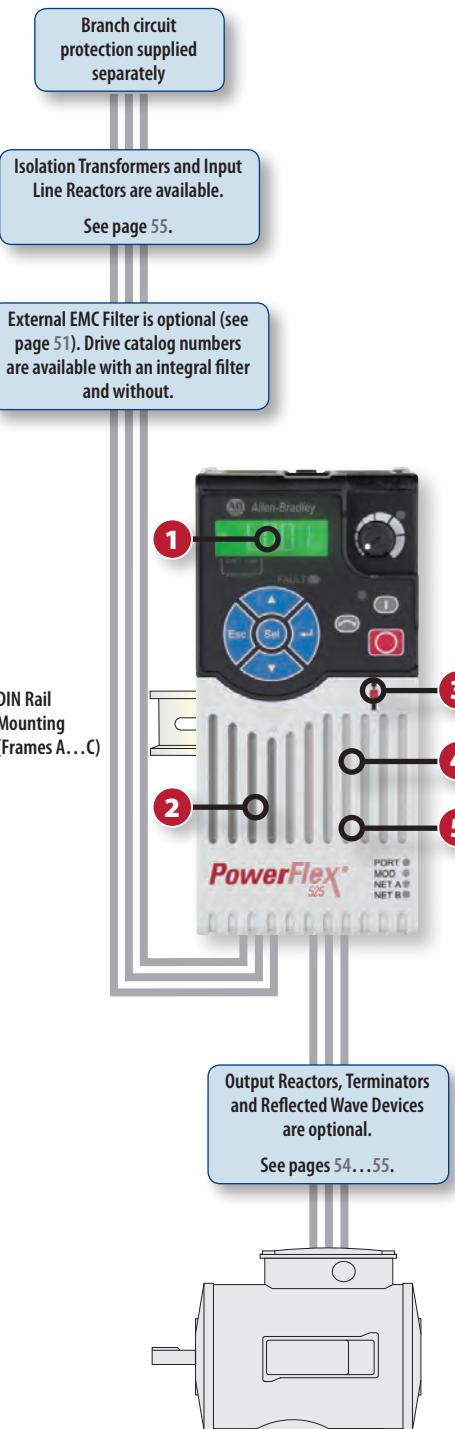

0.4...22 kW/0.5...30 Hp in voltages from 100...600V

PowerFlex 525 AC drives feature an innovative, modular design offering fast and easy installation and configuration. These cost-effective compact drives come with embedded EtherNet/IP™ communications, safety, USB configuration and a high ambient operating temperature capability. PowerFlex 525 AC drives also provide a variety of motor control algorithms including volts per hertz, sensorless vector control, closed loop velocity vector control, and permanent magnet motor control, making these drives ideal for a vast array of applications.

PowerFlex 527 AC Drive

0.4...22 kW/0.5...30 Hp in voltages from 100...600V

PowerFlex 527 AC drives is the first compact PowerFlex drive designed to exclusively work with a Logix controller and programmed with Studio 5000 integrated motion instructions. The PowerFlex 527 drive is an ideal AC drive to complement machines already using Kinetix servo drives. It features a built-in dual port for EtherNet/IP hardwired and networked safety. Using Studio 5000 software, the configuration and programming experience saves start up time, and delivers a coordinated and synchronized machine.

Options		See pages 49...56

* Requires a Logix controller capable of supporting Motion Instructions at a minimum revision of v24.

- 1** LCD QuickView™ Human Interface Module (HIM) with multi-language support in scrolling text. See page 49 for other options.
- 2** Choice of built-in hardwired or networked safety SIL3, PLe, CAT 3. Built-in safety simplifies machine design and minimizes equipment redundancies.
- 3** Works exclusively with Logix controller. Program with motion instruction in Studio 5000 Logix Designer Software allows a common user experience.
- 4** Communications: Built-in dual port for EtherNet/IP. See page 49 for additional options.

(1) Resistors listed are rated 5% duty cycle.

(2) Use of Rockwell Automation resistors is recommended. The resistors listed have been carefully selected for optimizing performance in a variety of applications. Alternative resistors may be used, however, care must be taken when making a selection. Refer to the PowerFlex Dynamic Braking Resistor Calculator, publication [PFLEX-AT001](#).

(3) Requires two resistors wired in parallel.

(4) Requires three resistors wired in parallel.

PowerFlex 70 AC Drive

0.37...37 kW/0.5...50 Hp in voltages from 200...600V

The PowerFlex 70 offers a compact package of power, control and operator interface, designed to meet the demands for space, simplicity and reliability. This drive provides a broad spectrum of features, allowing you to easily integrate it into your architecture and configure it for most application needs.

PowerFlex 70 at a Glance

Options		See pages 126...148

(1) Certification testing has not been performed on 600V drives.

(2) Refer to the website for specific catalog numbers.

1 LCD Programmer shown (not supplied). See page 126 for other options.

2 Multiple communication options for industrial networks are available. See page 127.

3 24V DC I/O Standard. 6 digital inputs, 2 analog inputs, 2 relay outputs, and 1 analog output. 115V interface is available. See page 129.

4 Integral dynamic brake transistor. Internal and external resistors are available. See pages 133...135.

E	555.8 (21.88)	280.3 (11.04)	117.2 (4.61)	89.9 (3.54)	18.6 (41)

(1) Weights include HIM and I/O.

Additional PowerFlex Architecture-class Drives

These time-proven PowerFlex AC drives have been designed to meet a wide variety of applications.

PowerFlex 700 AC Drive

The PowerFlex 700 drive covers a wide range of horsepower ratings and is designed to control three-phase induction motors in applications with requirements ranging from the simplest speed control to the most demanding torque control.

PowerFlex 700 AC Drive at a Glance

Ratings	200...240V: 0.37...66 kW / 0.5...100 Hp / 2.2...260 A 500...600V: 1...150 Hp / 1.7...144 A	380...480V: 0.37...132 kW / 0.5...200 Hp / 1.1...248 A 690V: 45...132 kW / 52...142 A
Motor Control	V/Hz Control	Sensorless Vector Control
Enclosures	IP00, NEMA / UL Type Open	IP20, NEMA / UL Type 1

PowerFlex 700S AC Drive

The PowerFlex 700S offers optimized integration for the most demanding stand-alone and coordinated drive control and drive system applications. The DriveLogix option combines the powerful performance and flexible control of PowerFlex AC drives with a high-performance Logix engine to produce a highly functional, cost effective drive and control solution.

PowerFlex 700S AC Drive at a Glance

Ratings	200...240V: 0.75...66 kW / 1...100 Hp / 4.2...260 A 500...600V: 1...1600 Hp / 1.7...1500 A	380...480V: 0.75...800 kW / 1...1250 Hp / 2.1...1450 A 690V: 50...1500 kW / 52...1500 A
Motor Control	V/Hz Control	Vector Control with FORCE Technology (with and without encoder)
Enclosures	IP20, NEMA / UL Type1	IP21, NEMA / UL Type 1

PowerFlex 700L AC Drive

The PowerFlex 700L is available with the PowerFlex 700 or PowerFlex 700S control in a fully regenerative, liquid-cooled power structure that offers great performance and high power. This liquid-cooled drive features regenerative braking, high-response speed and position control, continuous holdback, rapid deceleration, and stopping of high inertia loads.

PowerFlex 700L AC Drive at a Glance

Ratings	380...480V: 200...860 kW / 268...1150 Hp / 360...1250 A 690V: 355...657 kW / 475...881 Hp / 380...705 A	500...600V: 345...650 kW / 465...870 Hp / 4.25...800 A
Motor Control	Select PowerFlex 700 or PowerFlex 700S Control	
Enclosures	IP00, NEMA / UL Type Open (Frame 2)	IP20, NEMA / UL Type 1 (Frames 3A, 3B)

PowerFlex 753 AC Drive

0.37...270 kW/0.5...400 Hp in voltages from 200...690V

Designed for general purpose applications, the PowerFlex 753 AC drive offers multiple options and features along with the added benefit of simple integration. The PowerFlex 753 offers standard built-in I/O, making it an ideal solution for OEMs and system integrators looking to reduce engineering costs, deliver machines to market faster and meet end-user demand for more productive and safer machines.

PowerFlex 753 Drive at a Glance

Options	See pages 126...148

(1) Requires Dual-port EtherNet/IP Option Module (Cat. No. 20-750-ENETR), firmware version 7, Studio 5000 Logix Designer, and Drive Add-On Profiles version 4.04 or higher.

(2) Certification requires 11-series I/O and ATEX daughter card options.

(3) Certification applies to 20-750-S and 20-750-S1 Safety Options when installed in drive.

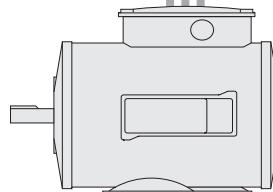

Branch circuit protection supplied separately

Isolation Transformers and Input Line Reactors are available.
See pages 138...148.

Integral EMC Filter, External Common Mode Choke is available.
See page 130 and 1321 Power Conditioning Products Technical Data, publication [1321-TD001](#), for additional information.

Output Reactors, Terminators and Reflected Wave Devices are optional.
See pages 136...148.

Safety, feedback, and other drive options are available.
See pages 129...132.

- 1 LCD Human Interface Module (HIM) with multi-language support in scrolling text available as optional accessory. See page 126 for other options.
- 2 Multiple communication options for industrial networks available. See page 126 for additional options.
- 3 Embedded I/O: 3 digital inputs, 1 relay output, 1 transistor output, 1 analog input, 1 analog output, and 1 PTC input. See page 126 for additional options.
- 4 Integral brake resistor on Frames 1...5, optional on Frames 6...7. Resistors are available. See page 136.

(1) Frames 1...5 are IP20, NEMA/UL Type Open. Frames 6...7 are IP00, NEMA/UL Type Open. Frames 1...7 can be converted to IP20, NEMA/UL Type 1 with optional kit (20-750-NEMA1-Fx), where x is the frame size.

(2) Drive must be programmed to lower voltage to obtain the currents shown in parentheses.

(3) The 5th character determines Input Type; "1" = AC input with precharge and DC terminals, and "A" = AC input with precharge and no DC terminals. For DC input drives, see [DRIVES-SG001](#), the PowerFlex Common Bus Configuration Selection Guide.

(4) The 11th character determines default Filtering and Common Mode Cap jumper configuration; "J" = Installed, and "A" = Removed.

(5) The 12th character determines whether an internal dynamic braking IGBT is included; "A" = Internal dynamic braking transistor installed, and "N" = No internal dynamic braking transistor.

PowerFlex 755 AC Drive

0.37...1500 kW/0.5...2000 Hp in voltages from 200...690V

Designed for flexibility, connectivity and productivity, the PowerFlex 755 AC drive provides ease of use and high performance for a wide variety of motor control applications. Ideal for machines that benefit from safety options, application flexibility, and packaging designed to meet a variety of environmental conditions, the PowerFlex 755 drive offers more selection for control, communications, safety, and supporting hardware options than any other drives in its class.

The PowerFlex 755 AC drive can be configured and programmed by using motions instructions within the Studio 5000 environment that are shared with Kinetix servo drives. This common user experience helps reduce complexity and save valuable engineering time.

Options	See pages 126...148	

(1) Certification applies to 20-750-S, 20-750-S1, 20-750-S3, and 20-750-S4 safety options when installed in drive.

(2) Certification requires 11-series I/O and ATEX daughter card options.

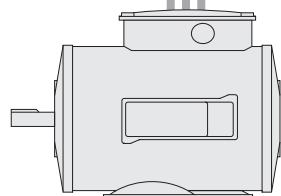

Branch circuit protection supplied separately

Isolation Transformers and Input Line Reactors are available.
See pages 138...148.

Integral EMC Filter. External Common Mode Choke is available.
See page 130 and 1321 Power Conditioning Products Technical Data, publication 1321-TD001, for additional information.

Output Reactors, Terminators and Reflected Wave Devices are optional.
See pages 136...148.

Safety, feedback, and other drive options are available.
See pages 129...132.

1 LCD HIM with multi-language support in scrolling text available as optional accessory. See page 126 for other options.

2 Communications: Embedded EtherNet/IP. See page 126 for additional options.

3 Embedded I/O: 1 Digital Input. See page 126 for other options.

4 Integral brake transistor on Frames 1...5, optional on Frames 6...7. Resistors are available. See page 136.

PowerFlex 755 Wall Mount Drives

PowerFlex 755 wall mount drives have a power range from 0.75 kW / 1 Hp to 270 kW / 400 Hp and are available in several factory and field installable enclosure options to meet most environmental requirements.

The standard enclosure is optimized for cabinet installation and rated at IP00/IP20, NEMA/UL Type Open. Wall mount drives can be converted to IP20, NEMA/UL Type 1 with an optional kit containing a debris hood and conduit plate. A factory enclosure option is also available with extra protection (IP54, NEMA Type 12) for harsh environments.

Flange mount drives are available via a factory option (Frames 1...5) or field installable kits (Frames 6...7) and are designed to reduce panel cooling requirements by mounting the drive heatsink outside the cabinet.

A DC link choke is included on all frames and internal brake transistor is standard on Frames 1...5 and optional on Frames 6...7.

PowerFlex 755 Floor Mount Drives

PowerFlex 755 floor mount drives have a power range from 200 kW / 250 Hp to 1400 kW / 2000 Hp, and offer multiple duty ratings to provide flexibility for different application requirements. One drive can provide three different motor current ratings. For example a 480 A drive can run a 400 Hp motor in light duty, a 350 Hp motor in normal duty, and a 300 Hp motor in heavy duty.

- Light Duty = 110% of motor rated current for 60 seconds
- Normal Duty = 110% of motor rated current for 60 seconds/150% of motor rated current for 3 seconds
- Heavy Duty = 150% of motor rated current for 60 seconds/180% of motor rated current for 3 seconds

Other power options from the factory include disconnect, reactor, contactor, integrated MCC bus for direct connection to CENTERLINE MCC, auxiliary transformer or wiring bay.

IP54, NEMA Type 12 Drive and Options (2500 MCC Style Cabinet)
(Frame 9 shown)

Includes: DC link choke, Integrated AC line fuses, roll-out design, exhaust hood, and option bay for control/protection devices.

Roll-out Design
(Frame 8 shown)

A roll-out cart is required for Frame 8...10 drives and Frame 9...10 optional bay chassis. The cart has an adjustable Curb Height of 0...182 mm (0...7.2 in.) and curb offset/reach of 0...114 mm (0...4.5 in.). See page 131 for ordering information.

- (1) Frames 1...5 are IP20, NEMA/UL Type Open. Frames 6...7 are IP00, NEMA/UL Type Open. Frames 1...7 can be converted to IP20, NEMA/UL Type 1 with optional kit (20-750-NEMA1-Fx), where x is the frame size of the drive.
- (2) Drives must be programmed to lower voltage to obtain the currents shown in parentheses.
- (3) The 5th character determines Input Type; "1" = AC input with precharge and DC terminals, and "A" = AC input with precharge and no DC terminals. For DC input drives, see [DRIVES-SG001](#), the PowerFlex Common Bus Configuration Selection Guide.
- (4) The 11th character determines default Filtering and Common Mode Cap jumper configuration; "J" = Installed, and "A" = Removed.
- (5) The 12th character determines whether an internal dynamic braking IGBT is included; "A" = Internal dynamic braking transistor installed, and "N" = No internal dynamic braking transistor.

(1) These drives have dual current ratings; one for normal duty applications, and one for heavy duty applications (in parenthesis). The drive can be operated at either rating.

(2) The 11th character determines default Filtering and Common Mode Cap jumper configuration. "J" = Installed, "A" = Removed.

(3) Alternate 600V ratings when connected to drives 60 Hp and greater in common DC input applications with uncontrolled front ends.

(4) Also available with internal Brake IGBT (20G1xxxxxxAN0NNNNN).

(5) A roll-out cart is required with Frame 8...10 drives to assist with power wiring and cabinet mounting. Refer to page 131.

380...400V AC, Three-phase Drives (continued)

Flange Mount (Front: IP20, NEMA/UL Type Open; Back/Heatsink: IP66, NEMA/UL Type 4X)

Note: Frame 6...7 IP00, NEMA Type Open drives can be converted to a flange mount drive (Back/Heatsink: IP66, NEMA/UL Type 4X) with an optional user installed flange kit (20-750-FLNG4-F6 for Frame 6, and 20-750-FLNG4-F7 for Frame 7). See page 88 for 380...400V, Frame 6...7 IP00, NEMA Type Open drives.

(1) Frames 1...5 are IP20, NEMA/UL Type Open. Frames 6...7 are IP00, NEMA/UL Type Open. Frames 8...10 are IP20, NEMA/UL Type 1. Frames 1...7 can be converted to IP20, NEMA/UL Type 1 with optional kit (20-750-NEMA1-Fx), where x is the frame size of the drive.

(2) Light Duty rating only available on Frame 8...10 drives. Light Duty allows 110% overload for 1 minute, and does not have a 3 second overload rating.

(3) The 5th character determines Input Type; "1" = AC input with precharge and DC terminals, and "A" = AC input with precharge and no DC terminals. For DC input drives, see [DRIVES-SG001](#), the PowerFlex Common Bus Configuration Selection Guide.

(4) The 11th character determines default Filtering and Common Mode Cap jumper configuration; "J" = Installed, and "A" = Removed.

(5) The 12th character determines whether an internal dynamic braking IGBT is included; "A" = Internal dynamic braking transistor installed, and "N" = No internal dynamic braking transistor.

(6) The 6th character (designated by an * in this table) determines Enclosure Type and Depth. "B" = IP20, NEMA/UL Type 1, MCC style 600 mm (23.6 in.) deep, and "L" = IP20, NEMA/UL Type 1, MCC style 800 mm (31.5 in.).

(7) A roll-out cart is required with Frame 8...10 drives to assist with power wiring and cabinet mounting. Refer to page 131.

(1) The 5th character determines Input Type; "1" = AC input with precharge and DC terminals, and "A" = AC input with precharge and no DC terminals. For DC input drives, see [DRIVES-SG001](#), the PowerFlex Common Bus Configuration Selection Guide.

(2) The 11th character determines default Filtering and Common Mode Cap jumper configuration. "J" = Installed, "A" = Removed.

600V AC, Three-phase Drives

Frames 3, 4, and 5 are only 600V AC drives. Frames 6 and 7 are dual-voltage drives, and can be operated at 600 V or 690V AC.

Important: Frames 3, 4, and 5 must not be used in common DC input-sharing applications with Frames 6 or larger drives. For more details, contact your local Rockwell Automation sales office or your Allen-Bradley distributor.

(1) Frames 3...5 are IP20, NEMA/UL Type Open. Frames 6...7 are IP00, NEMA/UL Type Open. Frames 8...10 are IP20, NEMA/UL Type 1. Frames 3...7 can be converted to IP20, NEMA/UL Type 1 with optional kit (20-750-NEMA1-Fx), where x is the frame size of the drive.

(2) Light Duty rating only available on Frame 8...10 drives. Light Duty allows 110% overload for 1 minute, and does not have a 3 second overload rating.

(3) The 5th character determines Input Type; "1" = AC input with precharge and DC terminals, and "A" = AC input with precharge and no DC terminals. For DC input drives, see [DRIVES-SG001](#), the PowerFlex Common Bus Configuration Selection Guide.

(4) The 11th character determines default Filtering and Common Mode Cap jumper configuration; "J" = Installed, and "A" = Removed.

(5) The 12th character determines whether an internal dynamic braking IGBT is included; "A" = Internal dynamic braking transistor installed, and "N" = No internal dynamic braking transistor.

(6) The 6th character (designated by an * in this table) determines Enclosure Type and Depth. "B" = IP20, NEMA/UL Type 1, MCC style 600 mm (23.6 in.) deep, and "L" = IP20, NEMA/UL Type 1, MCC style 800 mm (31.5 in.).

(7) A roll-out cart is required with Frame 8...10 drives to assist with power wiring and cabinet mounting. Refer to page 131.

(table continues on next page)

600V AC, Three-phase Drives (continued)

Frames 3, 4, and 5 are only 600V AC drives. Frames 6 and 7 are dual-voltage drives, and can be operated at 600 V or 690V AC.

Important: Frames 3, 4, and 5 must not be used in common DC input-sharing applications with Frames 6 or larger drives. For more details, contact your local Rockwell Automation sales office or your Allen-Bradley distributor.

- (1) Frames 6...7 are IP00, NEMA/UL Type Open. Frames 8...10 are IP20, NEMA/UL Type 1. Frames 6...7 can be converted to IP20, NEMA/UL Type 1 with optional kit (20-750-NEMA1-Fx), where x is the frame size of the drive.
- (2) Light Duty rating only available on Frame 8...10 drives. Light Duty allows 110% overload for 1 minute, and does not have a 3 second overload rating.
- (3) The 5th character determines Input Type; "1" = AC input with precharge and DC terminals, and "A" = AC input with precharge and no DC terminals. For DC input drives, see [DRIVES-SG001](#), the PowerFlex Common Bus Configuration Selection Guide.
- (4) The 11th character determines default Filtering and Common Mode Cap jumper configuration; "J" = Installed, and "A" = Removed.
- (5) The 12th character determines whether an internal dynamic braking IGBT is included; "A" = Internal dynamic braking transistor installed, and "N" = No internal dynamic braking transistor.
- (6) The 6th character (designated by an * in this table) determines Enclosure Type and Depth. "B" = IP20, NEMA/UL Type 1, MCC style 600 mm (23.6 in.) deep, and "L" = IP20, NEMA/UL Type 1, MCC style 800 mm (31.5 in.).
- (7) A roll-out cart is required with Frame 8...10 drives to assist with power wiring and cabinet mounting. Refer to page 131.

(1) Light Duty rating only available on Frame 8...10 drives. Light Duty allows 110% overload for 1 minute, and does not have a 3 second overload rating.

(2) The 5th character determines Input Type; "1" = AC input with precharge and DC terminals, and "A" = AC input with precharge and no DC terminals. For DC input drives, see [DRIVES-SG001](#), the PowerFlex Common Bus Configuration Selection Guide.

(3) The 11th character determines default Filtering and Common Mode Cap jumper configuration; "I" = Installed, and "A" = Removed.

(4) The 12th character determines whether an internal dynamic braking IGBT is included; "A" = Internal dynamic braking transistor installed, and "N" = No internal dynamic braking transistor.

(5) A roll-out cart is required with Frame 8...10 drives to assist with power wiring and cabinet mounting. Refer to page 131.

Flange Mount (Front: IP20, NEMA/UL Type Open; Back/Heatsink: IP66, NEMA/UL Type 4X)

Note: Frame 6...7 IP00, NEMA Type Open drives can be converted to a flange mount drive (Back/Heatsink: IP66, NEMA/UL Type 4X) with an optional user installed flange kit (20-750-FLNG4-F6 for Frame 6, and 20-750-FLNG4-F7 for Frame 7).

See page 100 for 690V, Frame 6...7 IP00, NEMA Type Open drives.

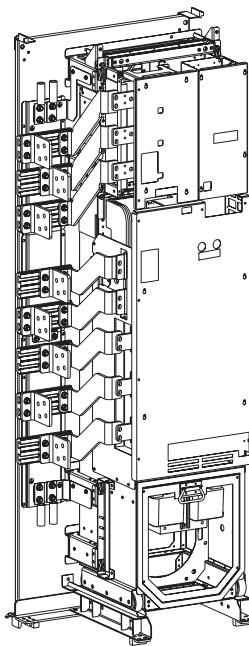

PowerFlex 755 Floor Mount Drives for Open Frame Designs

Floor mount, open frame drives are for applications that require power ranges from 215 kW to 1500kW (250 Hp...2000 Hp) and are contained within an enclosure of your choosing. These drives use the same drive unit(s) as standard IP20 and IP54 product. Open Frame applications can accommodate either AC input or Common Bus DC input systems.

Floor mount, open frame drives can also be horizontally mounted, with derating. Refer to publication [750-IN020](#) for details.

To order an IP00 drive:

1. Using the tables that follow, locate your desired drive output values.
2. Select the Base Drive Catalog Number for your desired output values.
3. Note the Quantity Required.
4. Order the specified quantity (1, 2, or 3) of the Base Drive Catalog Number.
5. Refer to page 130 for option kits and the PowerFlex 755 IP00 NEMA/UL Open Type Drive Installation Instructions, publication [750-IN020](#) for installation details.

Control Power Circuit Breaker Lock ⁽¹⁾		1489-AAL0A		1489-AAL0A		1489-AAL0A	
EMC Core, Converter Input, AC Input	Optional	20-750-EMCBUS1-F8		20-750-EMCBUS1-F8		20-750-EMCBUS1-F8	
EMC Core, Inverter Output		20-750-EMCCM1-F8		20-750-EMCCM1-F8		20-750-EMCCM1-F8	

- (1) Common DC input drives only.
- (2) EMC input cores are included with the 20-750-BUSS-Fx kits.
- (3) 24 volt supply cable is included with each Frame 8 drive unit.
- (4) 20-750-PH1-Fx and 20-750-FCBL1-Fx kits are used if the Control Pod is mounted in the drive. If the Control Pod is to be remote mounted (up to 23 m or 75 ft away), order a 20-750-RPD1-Fx kit instead.
- (5) Input and Output Field Termination kits required to meet UL certification
- (6) Only required when air inlet from bottom of cabinet is required

Power Options for PowerFlex 755 Floor Mount, AC Input Drives

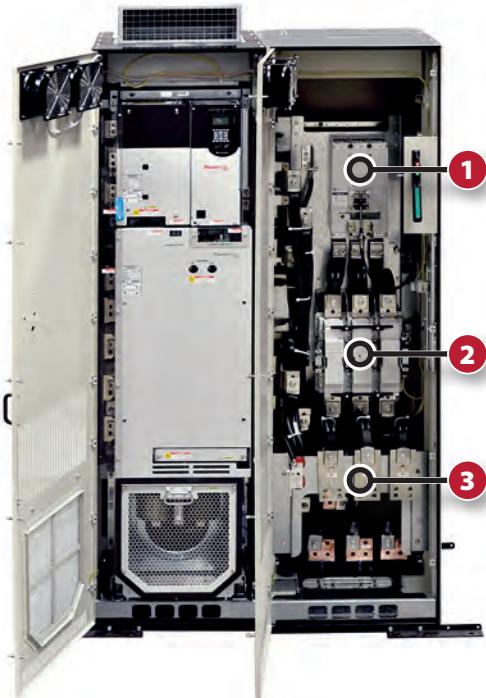

Pre-engineered, factory installed options are available with the PowerFlex 755 floor mount drives, which includes disconnects, reactors, contactors, MCC bus and wiring only bays.

To configure a catalog number for a floor-mount drive with options, perform the following steps:

1. Select the base drive catalog number from the tables on pages 108...111. Drive selection is based on the output amps and corresponding system overload(s) required by the application.
2. Select the duty rating. See the Required Options table on page 107 for duty rating details. For example: 21G1ALC460JN0NNNNN-**LD**.
3. Select the desired enclosure type as described on pages 108...111. For example: 21G1ALC460JN0NNNNN-LD.
4. Select Power Disconnect and/or Wire Only Bay option from the Required Options table on page 107. Add the desired option codes to the end of the base drive catalog number, separating each option code with a dash. For example: 21G1ALC460JN0NNNNN-LD-**P3**.
5. If options listed in the Additional Options table on page 107 are required, add the option code(s) to the end of the drive catalog number, separating each code with a dash. For example: 21G1ALC460JN0NNNNN-LD-P3-**P11**.

Note: A 600 mm wide cabinet bay is added to the right of the drive cabinet(s) to house the power options. The Wiring Only Bay option (-P14) also adds a 600 mm wide cabinet bay to the right of the drive cabinet(s).

Frame 8 with Power Option Bay

Input power landed on line-side of power disconnect.

- 1** Power Disconnect
Options -P3 or -P5

See Required Options on page 107.

Frame 9 with Power Option Bay

Input power landed behind circuit breaker, which is accessed by extracting rollout chassis.

- 2** Contactor
Options -P11 or -P12

See Additional Options on page 107.

- 3** Reactor
Options -L1, -L2, -L3, or -L4

See Additional Options on page 107.

Power Options for PowerFlex 755 Floor Mount, AC Input Drives (continued)

Required Options

Type	Option	Frame Size	Description
System Overload Duty Cycle ⁽¹⁾⁽²⁾	LD	8...10	100% continuous current, 110% current for 1 minute.
	ND		100% continuous current, 110% current for 1 minute, 150% for 3 seconds.
	HD		100% continuous current, 150% current for 1 minute, 180% for 3 seconds.
Power Disconnect ⁽¹⁾	P3	Input Thermal Magnetic Circuit Breaker	8...10 ⁽³⁾ This option is for disconnecting drive power. An Allen-Bradley 140G Molded Case Circuit Breaker is provided. Frame 8 drives include flange style handle operators that are door interlocking and padlockable. Frame 9 drive circuit breakers are pushbutton actuated with door interlocks and are padlockable.
	P5	Input Non-Fused Molded Case Disconnect Switch	8 Only This option is for disconnecting drive power. An Allen-Bradley 140G Molded Case Switch is provided. All switches include flange style handle operators that are door interlocking and padlockable. Note: PowerFlex 755 Frame 8 converter modules input fuses installed as standard equipment do not provide branch protection.
Wiring Only Bay	P14	Wiring Only Bay	8...10 This option identifies that an extra bay is provided for wiring the drive. This option extends the drive power bus from the drive bay into the option bay, making field connection options more flexible. No drive input protection is supplied with this option selection. If desired, a power option bay with a disconnect option can be added to the wiring bay. Documentation to reflect input disconnection and protection is customer supplied. See page 130 for more information on power cable entry/exit locations.

(1) Only one option of this type can be selected.

(2) See following selection tables for specific rating information.

(3) Frame 10 ordered via Engineered-To-Order (ETO) process.

Additional Options

Type	Option	Applicable Frame Size	Description
Contactors ⁽⁴⁾⁽⁵⁾	P11	8 Only	A contactor is provided between the AC line and the drive. The contactor is controlled by customer supplied 120V AC (480V input) or 230V AC (400V input) remote contact closure logic. A terminal block for control is provided for customer use, and is wired to 1 N.O. and 1 N.C. auxiliary contact on the contactor. Important: The P11 option 'Alternate Contact Circuit' is not intended to be used as a Start/Stop circuit.
	P12		A contactor is provided between the drive output and the motor. The contactor is controlled by customer supplied 120V AC (480V input) or 230V AC (400V input) remote contact closure logic. A terminal block for control is provided for customer use and is wired to 1 N.O. and 1 N.C. auxiliary contact on the contactor. Note: As an alternative to an output contactor, certain safety applications can be satisfied using the PowerFlex 750-Series Safe Torque Off Option Card (Cat. No. 20-750-S). Safe Torque Off is ideal for safety related applications requiring removal of rotational power to the motor without removing power from the drive. Safe Torque Off functionality offers the benefit of quick start-up after a demand on the safety system and helps reduce wear from repetitive start-up. It also provides safety ratings up to and including SIL3, PLe, and CAT 3.
Reactors ⁽⁴⁾⁽⁶⁾	L1	8...9	Provides an open core drive input line reactor that mounts inside the power bay option enclosure. Typical impedance is 3%.
	L2		Provides an open core drive output load reactor, which mounts inside the power bay option enclosure. Typical impedance is 3%.
	L3	8 Only	Provides an open core drive input line reactor that mounts inside the power bay option enclosure. Typical impedance is 5%.
	L4		Provides an open core drive output load reactor, which mounts inside the power bay option enclosure. Typical impedance is 5%.
MCC Power Bus ⁽⁴⁾⁽⁷⁾	P20	8...10	Provides a 1250 Amp MCC Bus.
	P22		Provides a 2000 Amp MCC Bus.
	P24		Provides a 3000 Amp MCC Bus.
Auxiliary Power	X1	Auxiliary Transformer	8 Only Auxiliary transformer providing 500VA. Available as an option on frame 8, IP20 units. This option is standard on all other cabinet configurations.

(4) Only one option of this type can be selected.

(5) Contactor options are not available for systems with MCC power bus.

(6) To accommodate a larger reactor, an 800 mm deep cabinet must be selected for the following Frame 8 drives; C750, C770, D710, D740 at light duty (LD), and C770 at normal-duty (ND).

(7) MCC bus is connected to the line side of the disconnect, as delivered from the factory.

- (1) Contact your local Rockwell Automation sales office or Allen-Bradley distributor for availability.
- (2) A Roll-out Cart is required with Frame 8...10 drives to assist with power wiring and cabinet mounting. Refer to page 131.
- (3) The 5th character determines Input Type. "1" = AC input with precharge and DC terminals. "A" = AC input with precharge and no DC terminals. For DC input drives, see [DRIVES-SG001](#), the PowerFlex Common Bus Configuration Selection Guide.
- (4) The 11th character determines default Filtering and Common Mode Cap jumper configuration. "J" = Installed, "A" = Removed.
- (5) The 6th character (designated by an * in this table) determines enclosure type. For that selection, refer to the Enclosure Type Selections table on this page.

Connect to a CENTERLINE Motor Control Center (MCC)

To select the splice kit best suited for your application, determine the following.

1. Are you connecting to a CENTERLINE® 2100 or CENTERLINE 2500 MCC?
2. While facing the front of the PowerFlex 755 drive, decide to which drive side that you want to connect.
3. Are you connecting PowerFlex 755 floor mount drives together, or are you connecting a PowerFlex 755 floor mount drive to a CENTERLINE MCC?

If you are connecting PowerFlex 755 floor mount drives together or if you are connecting a PowerFlex 755 floor mount drive to a CENTERLINE 2500 MCC, then use PowerFlex 755 CENTERLINE 2500 Splice Kits. Otherwise, use PowerFlex 755 CENTERLINE 2100 Splice Kits.

NOTE: A splice kit contains three splice plates.

PowerFlex 755 CENTERLINE 2100 Splice Kits

A complete installation requires one transition section and one bus bar splicing kit. Splicing kits include all necessary hardware to complete connection of all three-phases.

Mounting Channel	Busbar Position ⁽¹⁾	Amp Rating	Left-side Kit Cat No.	Right-side Kit Cat No.	Frame Sizes
N/A	Transition section ⁽²⁾	N/A	20-750-XSEC-LH-20G	20-750-XSEC-RH-20G	8...10

PowerFlex 755 Empty Option Bay

This section is for applications with a PowerFlex 755 floor mount drive that need additional cabinet space. These added cabinets provide an elegant packaging option when expanding a PowerFlex 755, frame 8, 9, or 10 lineup. All Empty Option Bay cabinets match the standard color (RAL 7032) of the PowerFlex 755 Floor Mount Drive. Each Empty Option Bay includes a sub-panel. Reference publication For installation details, see publication [750-IN031](#).

The Right Mount Bus Bar kits listed below can only be installed to the right of a PowerFlex 755 Floor Mount Drive, when facing the front of the drive. If the application requires mounting the Empty Option Bay to the left of the PowerFlex 755 Floor Mount Drive, then the Rear Drive Bus Bar can be installed behind the drive unit(s). Power cabling is landed on the Rear Drive Bus Bars and passed through the cabinet side wall to the Empty Option Bay.

The Option Bay Hardware Kit listed below contains the door handle, an air barrier (for use between cabinets) and a door overlay label. One is required for each option bay.

PowerFlex 755TL/TR AC Drives

7.5...4596 kW/10...6000 Hp in voltages from 400...690V

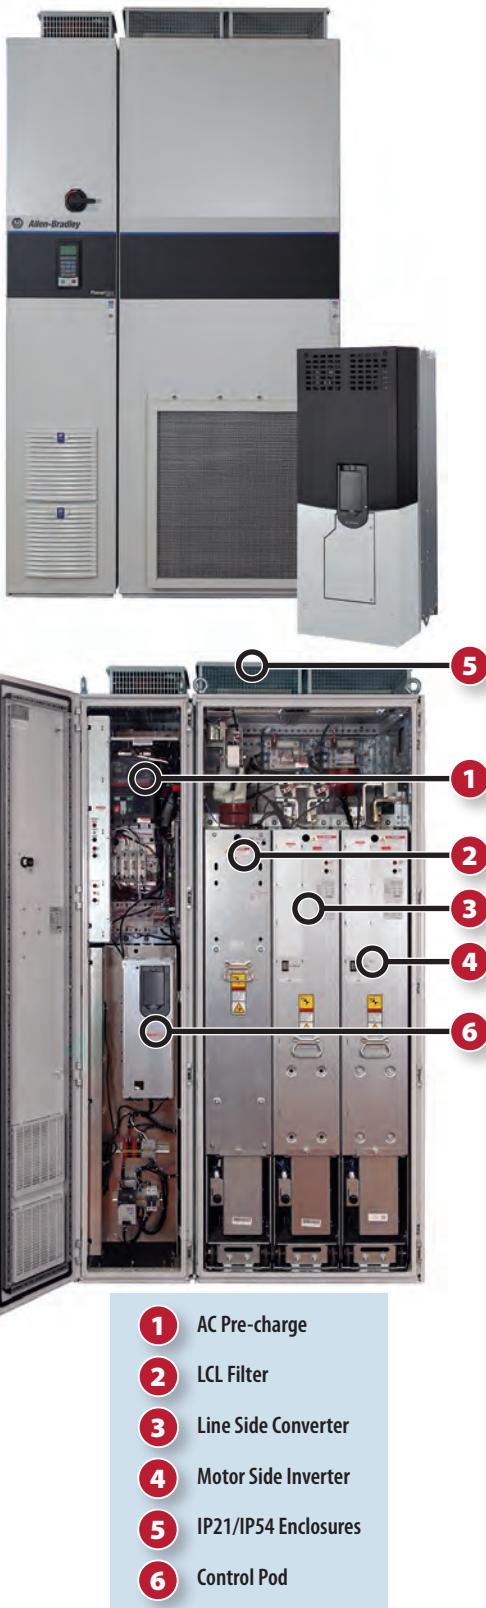

The new Allen-Bradley PowerFlex 755TL and 755TR drives expand the proven PowerFlex 753 and 755 AC drive portfolio and provide solutions for harmonic mitigation and regeneration. The drives offer energy-saving features and a world-class footprint along with simplified installation and start-up.

The new PowerFlex drives use TotalFORCE technology to deliver exceptional motor control through precise, adaptive control of position, velocity and torque. TotalFORCE technology incorporates several patented features that are designed to help optimize your system and maintain productivity through improved machine uptime.

(1) For PowerFlex 755TR Drives.

PowerFlex 755TL AC Drive

The PowerFlex 755TL drive provides harmonic mitigation and power factor correction through the use of active front end technology. By reducing the adverse effects of harmonic distortion, the drive helps improve energy efficiency, reduce energy costs and minimize power distribution issues on the factory floor. In addition, new TotalFORCE technology delivers exceptional motor control through precise, adaptive control of velocity, torque and position with patented features designed to help optimize your system and maintain productivity.

PowerFlex 755TR AC Drive

The PowerFlex 755TR drive has built-in regeneration capability that helps reduce energy consumption by delivering regenerative energy from motors back to the incoming supply. Line regeneration can reduce the need for braking resistors and associated cooling equipment and helps avoid wasteful dissipation of energy. The drive also offers harmonic mitigation and the benefits of TotalFORCE technology as well as a world-class footprint and simplified startup and installation.

(1) Low harmonic AFE (755TL) is only available in frame sizes 8, 9, and 10.

Control and Power Options for PowerFlex 755TL and TR Drives

Pre-engineered, factory installed options are available with the PowerFlex 755TL and 755TR drives.

To configure a catalog number for a PowerFlex 755T drive with options, perform the following steps:

2. Select the base drive catalog number from the tables on the previous pages. Drive selection is based on the output amps and corresponding system overload(s) required by the application.
For example: 20G1xxC750xNxNNNNN-Cx-Px.
3. Select required control from the Control and Power Options table. For example: 20G1xxC750xNxNNNNN-**C0**-Px.
4. Select required power from the table. Add the desired option codes to the end of the base drive catalog number, separating each option code with a dash. For example: 20G1xxC750xNxNNNNN-**C0-P15**.
5. If needed, select other power options from the table. For example: 20G1xxC750xNxNNNNN-**C0-P15-P46**.

Control and Power Options

Type	Option	Frame Sizes	Description	
Control Options	C0	Torque Accuracy Control	5...12	Option that enables increased torque performance capability and the ability to operate in a Field Oriented Control mode.
Power Options	P15	Top Cable Exit (with wiring bay)	8...15	Option that enables a user to bring in their motor cables from the top of the cabinet.
	P16	Top Cable Entry (with wiring bay)	10...15	Option that enables a user to bring in their power/input cables from the top of the cabinet.
	P17	Top Cable Exit (without wiring bay)	8...9	Option that enables a user to bring in their power/input cables from the top of the cabinet.
	P50	DC Bus Conditioner	8...15	Eliminates peak voltage spikes on the system DC bus. Intended for systems that are not solidly grounded.
	P51	DC Bus Conditioner with Marine Discharge	7...15	Eliminates peak voltage spikes on the system DC bus. Intended for systems that are not solidly grounded (for marine applications).
	P60	Back-to-Back Configuration	13...15	Option that enables a Back-to-Back configuration, providing a reduced footprint to support smaller installation areas.

(1) Requires a Communication Carrier Card (20-750-20COMM or 20-750-20COMM-F1). Refer to the Communication Accessories table on page [128](#) for details.

(2) For use only with DPI External Communications Kits 20-XCOMM-DC-BASE.

(3) Contact Rockwell Automation sales office for availability.

PowerFlex 750-Series Drives Legacy Communication Compatibility

Most legacy communication adapters (20-COMM) can be used with the PowerFlex 753/755. However, the restrictions stated below do apply.

Frame 1 - It is recommended that the 20-750-20COMM-F1 Communication Carrier Card only be installed in Port 4. Port 5 is not accessible when this module is installed.

Frames 2 and larger - It is recommended that the 20-750-20COMM Communication Carrier Card be installed in Port 6. By using Port 4 or 5, the adjacent left port becomes inaccessible to other option modules and it can interfere with network cable connections.

Adapter		Accesses Ports 0...6 for I/O Connections (Implicit and Explicit Messaging)	Accesses Ports 7 and Higher (I/O, Explicit Messaging)	Supports Drive Add-on Profiles	Supports Asian-Languages ⁽²⁾

(1) Chinese, Japanese, and Korean languages are supported at the time of publication.

(2) Requires this adapter firmware version or higher.

(3) Requires firmware version v1.05 or higher of the drive Add-on Profiles for Studio 5000 Logix Designer software.

(4) Controller must be capable of reading/writing 32-bit floating point (REAL) values.

(5) Supports all three modes of operation (RTU, P1, N2).

(1) For kits to be used with CIP Motion instructions, the card can only be used in slot 7 of the PowerFlex 755 drive. It also requires PowerFlex 755 firmware version 12 and higher, and Studio 5000 version 28 and higher.

Safety Options⁽¹⁾

Description	Cat. No.	Used with PowerFlex Drive			
		70	753	755	755TL/755TR
DriveGuard Safe Torque Off	20A-DG01	✓	—	—	—
Hardwired Safe Torque Off	20-750-S	—	✓	✓	✓
Hardwired Safe Speed Monitor	20-750-S1	✓ ⁽²⁾	✓ ⁽²⁾	✓	✓
Networked Safe Torque Off	20-750-S3	—	✓ ⁽³⁾⁽⁴⁾	✓ ⁽³⁾	✓ ⁽³⁾
Networked Integrated Safety Functions	20-750-S4	—	✓ ⁽⁵⁾⁽⁶⁾	✓ ⁽⁵⁾	✓ ⁽⁵⁾

- (1) All PowerFlex 7-series drives can accommodate only one safety option.
- (2) Requires the Dual Incremental Encoder or Universal Feedback Option. Also requires the 20-750-EMCSSM1-F8 EMC Option Kit with Frame 8...10 drives.
- (3) Requires Studio 5000 version 30 and higher.
- (4) Requires PowerFlex 755 firmware version 13 and higher. This option is not allowed while controlling a PowerFlex drive in CIP Motion mode.
- (5) Requires Studio 5000 version 31 and higher.
- (6) Requires PowerFlex 755 firmware version 14.002 and higher.

Feedback Options

Description	Cat. No.	Used with PowerFlex Drive		
		70	753/755	755TL/755TR
5V/12V Encoder ⁽¹⁾	20A-ENC-1	✓	—	—
Incremental Encoder	20-750-ENC-1	—	✓ ⁽²⁾	✓
Dual Incremental Encoder	20-750-DENC-1	✓ ⁽²⁾	✓	✓
Universal Feedback (includes Stegmann, Heidenhain, SSI, Biss, 5V Incremental)	20-750-UFB-1	✓ ⁽³⁾	✓	✓

- (1) Works only with PowerFlex 70 Enhanced Control. Drive is not CE EMC certified when the encoder interface option is installed.
- (2) Homing and registration functions are not supported when using this device with Studio 5000 Logix Designer embedded motion instructions. To use these functions, the Universal Feedback Board (20-750-UFB-1) must be used.
- (3) Only for PowerFlex 755 drives.

PowerFlex 70 Drive Small Duty Internal Dynamic Brake Resistors

Limited duty resistors mount directly to the back surface of the drive and require no extra panel space. Internal resistors are non-destructive and do not require a resistor overheat external safety circuit.

PowerFlex 70 AC Drive			Small Duty Internal DB Resistor

15 (20)	11 (15)					—	—		—	—	—				

(1) Duty cycle listed is based on full speed to zero speed deceleration. For constant regen at full speed, duty cycle capability is half of what is listed. Application Type 1 represents maximum capability up to 100% braking torque where possible. Application Type 2 represents more than 100% braking torque where possible, up to a maximum of 150%.

(2) Always check resistor Ohms against minimum resistance for drive being used.

PowerFlex 70 Medium Duty External Dynamic Brake Resistors

These resistors provide a larger duty cycle capability than the internal type. Includes an internal thermal switch for use in external safety circuit.

PowerFlex 70 AC Drive			Medium Duty External DB Resistor

(1) Duty cycle listed is based on full speed to zero speed deceleration. For constant regen at full speed, duty cycle capability is half of what is listed. Application Type 1 represents maximum capability up to 100% braking torque where possible. Application Type 2 represents more than 100% braking torque where possible, up to a maximum of 150%.

(2) Always check resistor Ohms against minimum resistance for drive being used.

(3) For 11 and 15 kW (15 and 20 Hp) applications, use two 7.5 kW (10 Hp) size resistors wired in parallel.

Internal Dynamic Brake Resistor Kits

These resistors have a limited duty cycle. Refer to the PowerFlex Dynamic Braking Resistor Calculator, publication [PFLEX-AT001](#) to determine if an internal resistor is sufficient for your application. An external resistor may be required.

(1) Input line reactors were sized based on the NEC fundamental motor amps. Output line reactors were sized based on the VFD rated output currents.

(2) Only rated for 600V and cannot be used on 690V applications.

(3) Requires two reactors wired in parallel.

(4) Requires three reactors wired in parallel.

(2) Only rated for 600V and cannot be used on 690V applications.

(3) Requires two output reactors wired in parallel.

(4) Requires three reactors wired in parallel.

PowerFlex DC Drive

1.2...1044 kW/1.5...1400 Hp in voltages from 200...690V

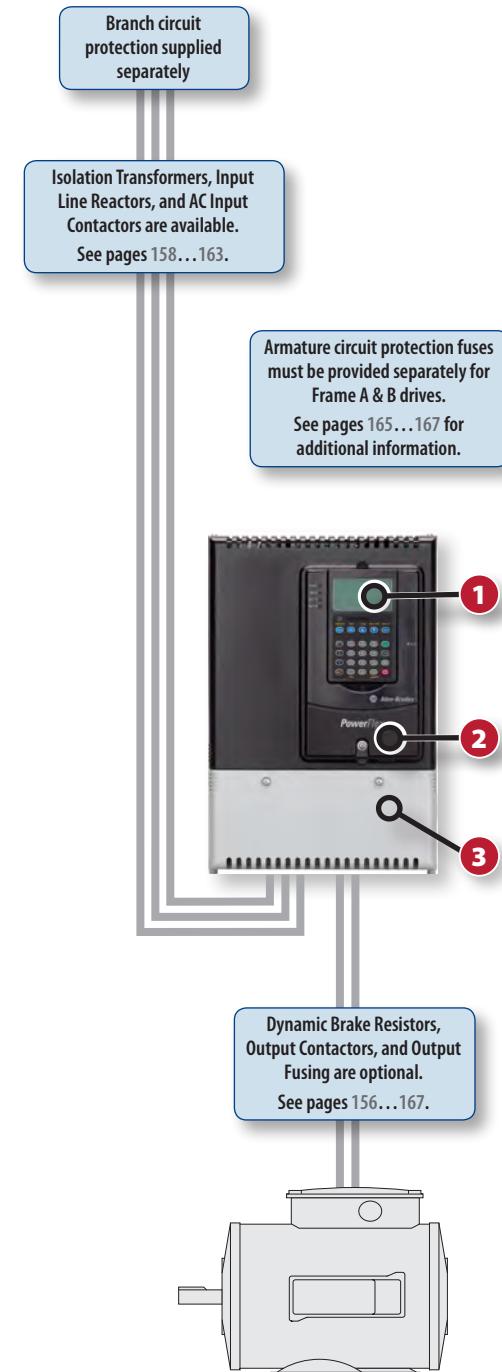

Engineered solutions available up to 4000 kW/ 6000 Hp

The PowerFlex DC drive combines powerful performance with flexible control to produce a highly functional, cost effective drive and control solution. This drive also offers many features that allow the user to easily configure the drive for most application needs. Drive modules are available in IP20 Open Type enclosures, in both regenerative and non-regenerative configurations. The PowerFlex DC comes standard with an armature converter, regulated field converter for field weakening or economy applications, an advanced regulator with integrated DPI functionality, DC tachometer, and encoder capability.

PowerFlex DC Field Controller

17...570 Amps in voltages from 60...500V

The PowerFlex DC Field Controller provides three-phase, four quadrant (reversing) DC motor or generator field control. The PowerFlex DC Field Controller can be used for standalone DC motor field control applications or with a PowerFlex DC Digital drive or PowerFlex DC Standalone Regulator (SAR). A fiber-optic interface option module or digital and analog I/O provides transmission of the reference, feedback, and status signals between the drive or regulator and the field controller.

In the standalone mode, the PowerFlex DC Field Controller provides power to a DC motor field with a fixed reference by using fixed I/O. The PowerFlex DC Field Controller can also be used to supply various DC non-motor loads (highly inductive loads) such as galvanic applications, electromagnets, synchronous motor excitation circuits, and more.

A PowerFlex DC field controller is a cost-effective way to modernize DC motor controls while using/re-purposing existing equipment.

(1) No dynamic brake resistor kit is available for this drive rating—must be sourced locally.

(2) Coil voltage equals 115V AC, 50/60 Hz.

(3) For more information, see the DC Contactor Crimp Lug Kit Specifications in the PowerFlex Digital DC Drive Technical Data, publication [20P-TD001](#).

(4) Wire and lug size are dependent on enclosure dimensions and local codes.

Overvoltage Protection Devices

The overvoltage protection device (voltage clamp) helps to provide protection against overvoltage for the PowerFlex DC field controller when used with a highly inductive load. An overvoltage can occur when the AC supply voltage is turned off before the field controller is disabled. A dampening resistor must be installed in combination with the voltage clamp. The dampening resistor is required to dampen the overvoltage that results from undershooting holding current when the voltage clamp SCR stops conduction.

Voltage Clamp

Voltage Clamp Cat. No.	Description
23P-FCOVPD-B-FA	For 200V AC Input, 17 A - 120 A output, Frame A field controllers
23P-FCOVPD-B-FB	For 200V AC Input, 245 A - 570 A output, Frame B field controllers
23P-FCOVPD-D-FA	For 500V AC Input, 17 A - 120 A output, Frame A field controllers
23P-FCOVPD-D-FB	For 500V AC Input, 245 A - 570 A output, Frame B field controllers

Dampening Resistor (RB) Kit Selection

AC Input Voltage Range (Vrms)	RB Resistor Value (Ohms)	RB Resistor Size (Watts)	RB Resistor Kit Cat. No. ⁽¹⁾
60...100V	220	930	23P-FC-RB100
101...200V	390	930	23P-FC-RB200
201...300V	680	930	23P-FC-RB300
301...400V	1000	930	23P-FC-RB400
401...500V	1200	930	23P-FC-RB500

(1) Resistor kits are IP00/Open Type and must be installed in an enclosure.

PowerFlex DC Drive Isolation Transformers - IP32, NEMA / UL Type 3R Standalone, 4...6% Nominal Impedance

Isolation transformers are available for installations that have specific types of AC supply configurations or require drive protection due to AC line disturbances.

Field Controller Frames A and B AC Input Line Fuses

AC input line fuses are externally mounted for frame A and B drives and must be sourced separately.

Line to Load Options

AC supply source

Know what type of power distribution grounding the drive will be on. Three of the most common grounding methods are: solidly grounded, high-resistance grounded, and ungrounded. Jumpers in our drives allow for installation in any of these configurations. A solidly grounded power distribution is recommended.

Input Fusing and Circuit Breakers

The recommended fuse types are listed in the product user manuals. Rockwell Automation offers a full line of Allen-Bradley® circuit breakers and motor protection devices to help meet many of your application needs.

Line reactor

Must be applied if:

- a) Installation site has switched power factor correction capacitors
- b) Installation site has power interruptions or voltage dips
- c) The transformer is too large in comparison to the drive (Refer to publication: DRIVES-IN001_).

Input filter

Compact PowerFlex drives: External EMC filter required for EMC compliance. With PowerFlex 523, 525 and 527 AC drives, EMC filtering is embedded at 200V and 400V. Architecture drives: External EMC filter only required with long motor cables and/or specific immunity requirements.

AC drive

Normal duty (ND) rating: 110% overload for 1 minute and 150% overload for 3 seconds. No excessive starting overload, transient overload or high duty cycle. Most typical AC drive applications are normal duty.

Heavy duty (HD) rating: 150% overload for 1 minute and 180% overload for 3 seconds. Required for high starting torque (example: heavily loaded conveyors), high brake-away torque (example: extruders and mixers) and high running torque (example: reciprocating compressors).

Output device or cable termination

Required if motor cable lengths exceed stated values
(Refer to publication: DRIVES-IN001_).

AC Motor

Inverter-duty rated at a minimum

Important Installation Guidelines

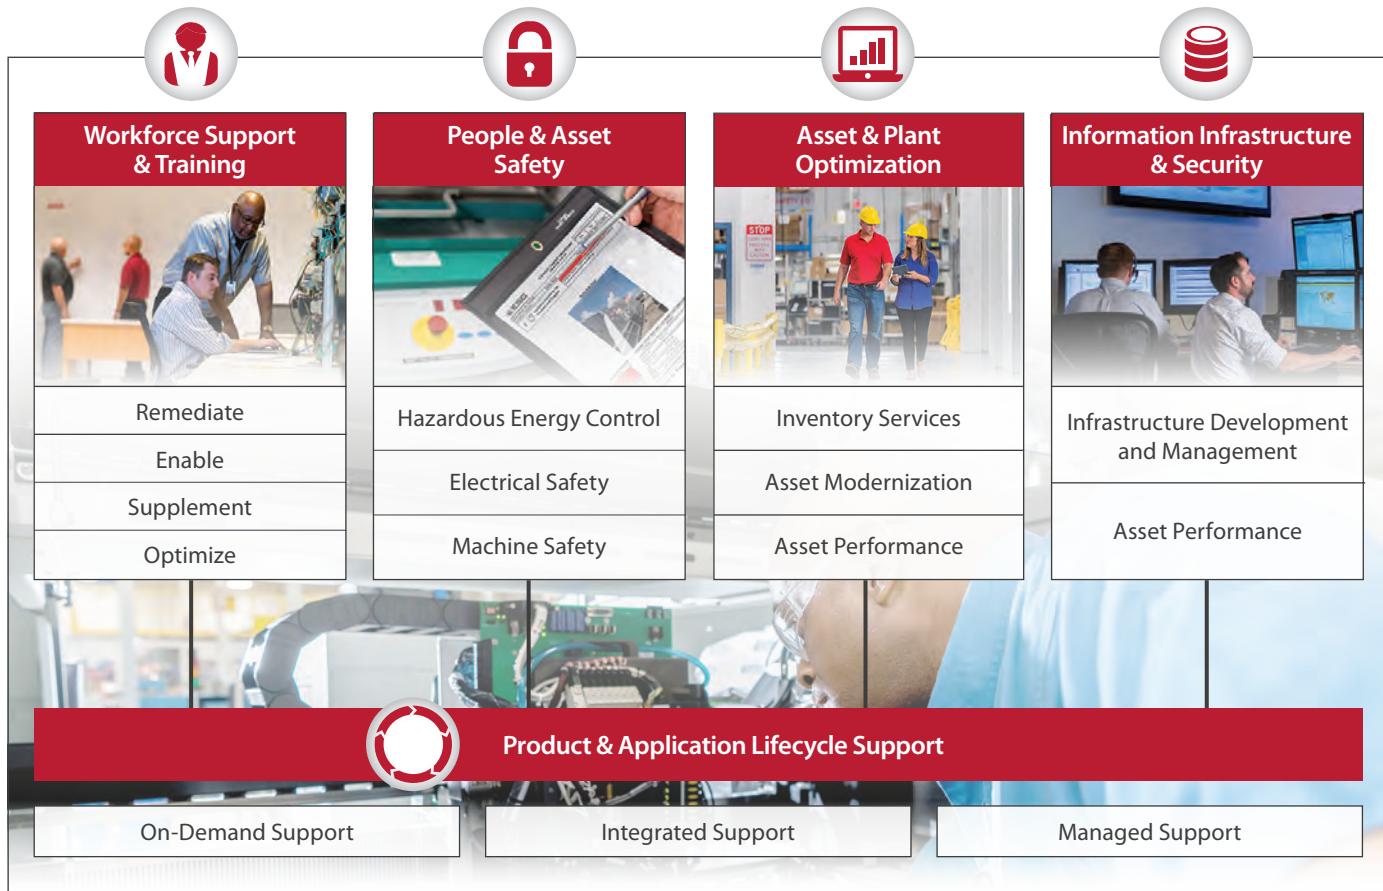

Buying a high-performance PowerFlex drive is the first step toward gaining improved flexibility and productivity. Installing your drive properly is also important.

Environment – Consider the amount and type of pollution the drives will be exposed to so plans can be made for proper mitigation. IP54 drives or cabinets, closed loop cooling, filtering of external air and other factors may be necessary.

Mounting Considerations – Even if the ambient temperature is within the specifications of the product, it is important to allow for proper airflow and cooling of the product.

ROCKWELL AUTOMATION SERVICES

Minimizing Risk. Maximizing Productivity.

For more information about how we can help you solve your unique business challenges, contact your local authorized Allen-Bradley distributor or Rockwell Automation sales office, or visit: rok.auto/services
